

SaunaLED-series

LEDIFY 

Sauna is from Finland and so is LEDIFY.

Our sauna LED lighting is made for all kinds of saunas from luxurious spas to private wood-burning saunas. As a Finnish family business, our operations are guided by traditional Finnish values; Reliability, authenticity, and perseverance with close relationship with nature. Our main products have earned the Finnish Key Flag Symbol.

SaunaLED lighting series is made to withstand the highest Finnish sauna standards, SaunaLED series can be even mounted in the ceiling of the sauna room.

KUIVI LED sauna luminaire is a modern model of a traditional Finnish sauna lamp with alder shade and LED inside.

Our passion is to create sauna specific lighting products. We can provide unique solutions for your specific needs. Let us light up your sauna experience.

**SAUNA
LIGHTS**

SAUNALED

LED-valaisinsarja | LED belysningserie | LED light series

LEDIFY SaunaLED lighting series are designed to withstand harsh conditions: heat and moisture in sauna, or outdoors winters cold and summer heat. SaunaLED series is originally designed for a Finnish sauna.

The LED lights of this series can be mounted in the ceiling, behind the backrest, on the wall, under the benches, railing etc. A space between SaunaLED lamps should be approx. 30cm.

Each LED lamp has its own 5-meter-long cable with quick connectors. This gives the SaunaLED series a good dimension and enables versatile lighting solutions. If necessary, the LED lamp can be connected to a total of 10 meters of cable (2 pieces of 5m connecting cables). This makes it possible to illuminate large rooms.

Small size, very low operating temperature and beautiful 3000K (warm) light makes LEDIFY SaunaLED series suitable for many rooms. LEDs can be installed above the shower, inside of shelf units, nearby the fireplace or to lighten up wall structure. They can be also used in a car or a boat or cottage. SaunaLED series is suitable for use with battery power or solar panels, as the voltage is 12V.

SaunaLED installation

The installation of LEDIFY SaunaLED series is quick and easy for a professional. The sales package includes clear and easy installation instructions so the installation can also be done in accordance with them.

The mounting hole for each lamp is \varnothing 12 mm. The SaunaLED lamp is attached to this hole by its springs which will open up.

Each lamp has a 15cm-long cable with quick coupling, which can be easily be attached to 5m connecting cable with quick coupling as well. The cables of SaunaLED series are heat resistant up to + 180 ° C so they are suitable to use in sauna installation according to all the requirements.

The SaunaLED lamp can be replaced with a new one even after years of use because of the easy quick couplings. (The exchange is done by pulling out the old lamp from the mounting hole, disconnect the wiring quick couplings, connect the new lamp with the old cable and insert a new lamp into place.)

SaunaLED wiring should be mounted behind the sauna wall or behind of the roof structures. The 5m connecting cables will be attached to the 16-pin connector with quick couplings. 16-pin connector is IP20 and therefore it has to be placed in a dry place. It can be placed behind the wall structures. 5m-long cable attaches 16-pin connector to the transformer with a plug.

SaunaLED IP20 transformer should be placed in a dry place with normal room temperature, e.g. in the ceiling of shower room or in the dressing room behind sauna. If the transformer is installed in the sauna room, it has to be placed max. 1 m in height. In the sauna room or outdoors the transformer has to be protected from water and moisture and cased in order to achieve minimum of IP44 protection rating.

LEDIFY SaunaLED series can be dimmed by the secondary side (12V). We recommend using an LEDIFY Magic Sensor 201234 or LEDIFY Remote Control 241123. SaunaLED series includes the 6W 12V transformer which cannot be dimmed on primary side.

Always use a qualified electrician for electrical installation work!

LEDIFY KUIVI is a Finnish LED sauna light which gives a comfortable light to modern as well as traditional saunas. This LED sauna light is suitable for installation on both wood and electric saunas.

KUIVI has been developed to withstand extreme heat and moisture of sauna room. KUIVI sauna light manufactured entirely in Finland. KUIVI can replace previously used incandescent lamp in the sauna.

Although the KUIVI LED sauna light is only 3W (355lm), it gives excellent general light from the wall of the sauna. Soft warm white light color (3000K) is pleasant to the sauna, just the right tone for the different sauna materials. The lamp can't be dimmed. The light source (LED) is extremely long lasting, the lifetime is over 36,000h, and the KUIVI as a whole has a 2 year warranty.

KUIVI LED lamp is installed on the wall. You can choose from two models: surface mount or recessed mount. According to their names, the surface mounting model is installed to the wall surface and the recessed mounting model is embedded within the structure of the wall.

The alder wood frame doesn't produce any resin. Both KUIVI models are available in five different colors: light wood, dark wood, white, black and grey. The shade can also be painted or varnished to match the colors of your sauna, then choose light wood.

KUIVI installation

The KUIVI surface mount elevates only 84mm from the wall, the dimensions of wooden frame is 215mm x 215mm.

The luminaire of recessed mounting model is embedded in the wall with metal housing and the 230mm x 230mm wooden frame is left over the wall surface. Elevation from the wall is only 20mm, the lamp blends beautifully into the wall structure.

KUIVI should be installed to under the height of 1 meter in the sauna room.

KUIVI is suitable for both indoor and outdoor use, the luminaires protection rating is IP44

KUIVI's installation is easy and fast, package includes helpful manuals.

The KUIVI lamp has a 10cm cable equipped with quick connector. The luminaire is plugged to the 5m connection cable from the transformer

The wires of the lamp meet the requirements and withstand +180°C of heat. The wires have a braided surface over silicone tubing.

The 5m connection cable between the transformer and the luminaire can be easily cut to the suitable length.

KUIVI's wiring are leaded to the sauna from behind the wall structures. Retrofitting to the old sauna is also possible for an electrician to do so.

KUIVI's driver (IP20) should be placed in a dry place with a normal temperature, e.g. behind the sauna panels or next room behind the wall. If the driver is installed inside the sauna, it should be placed under 1 meter in height and enclosed (protected from water and humidity) to achieve IP44 or IP67 protection rating.

KUIVI's driver is very small: 39mm x 48mm x 20mm.

LEDIFY KUIVI sales package contains:

- 1 KUIVI shade and luminaire with wires
- 5 m connecting cable
- Driver
- Mounting screws
- Installation instructions
- Metal housing – recessed model

KIUASLED

LED-kiuasvalo | LED-bastuugn ljus | LED sauna heater spot light

LEDIFY KiuasLED is a Finnish LED luminaire, an accessory for LEDIFY SaunaLED series. KiuasLED is suitable for installation in both, wood and electric saunas.

LEDIFY KiuasLED is a Finnish LED luminaire, an accessory for LEDIFY SaunaLED series. KiuasLED is suitable for installation in both, wood and electric saunas.

KiuasLED withstands the steam and heat rising from the sauna heater, so therefore it's an excellent choice for illuminating e.g. a stone wall behind the heater. If you want to highlight the wall surface, install KiuasLED lamps on the ceiling at about 25cm apart and about 2cm from the wall. Suitable number of luminaires in one meter is 3.

The beam angle of the KiuasLED is narrow 15°, so the illumination is applied beautifully to the desired destination. The rising steam from the heater appears brightly lit.

Colors: Gold, Silver and Black

The KiuasLED has a light color of 3000K (the same warm shade with LEDIFY SaunaLED series).

We also supply KiuasLED 4000 Kelvin as a special order product. By installing side by side 2 KiuasLED lights: one red and one yellow, you get the feel of the campfire. These are also special order products.

The LEDIFY KiuasLED has its own 5m long cable. If necessary, you can connect a total of 10 meters of wire (2 x 5m), allowing reach for large rooms.

KiuasLED is suitable for use with solar panels, because of the 12V voltage.

KiuasLED installation

The installation of LEDIFY KiuasLED is quick and easy for a professional. The mounting hole for each lamp is Ø 12 mm. The KiuasLED lamp is attached to this hole by its springs which will open up. Each lamp has a 15cm-long cable with quick coupling, which can be easily be attached to 5m connecting cable with quick coupling as well. The cables of KiuasLED are heat resistant up to +180°C so they are suitable to use in sauna installation according to all the requirements. The KiuasLED lamp can be replaced with a new one even after years of use because of the easy quick couplings. (The exchange is done by pulling out the old lamp from the mounting hole, disconnect the wiring quick couplings, connect the new lamp with the old cable and insert a new lamp into place.)

KiuasLED wiring should be mounted behind the sauna wall or behind of the roof structures. The 5m connecting cables will be attached to the 16-pin connector of SaunaLED series with quick connector. 16-pin connector is IP20 and therefore it has to be placed in a dry place. It can be placed behind the wall structures. 5m-long cable attaches 16-pin connector to the transformer with a plug.

SaunaLED IP20 transformer should be placed in a dry place with normal room temperature, e.g. in the ceiling of shower room or in the dressing room behind sauna. If the transformer is installed in the sauna room, it has to be placed max. 1 m in height. In the sauna room or outdoors the transformer has to be protected from water and moisture and cased in order to achieve minimum of IP44 protection rating.

LEDIFY KiuasLED sales package Includes

KiuasLED luminaire

5 m connecting cable

LEDIFY Kiuas LED tekniset tiedot

Voltage.....	12 V
Power	0,35 W/LED
Valon väri	3000K warm white
Protection rating	IP54
Mounting hole	12mm

NOTE. If you want to use e.g. 3 pieces of KiuasLEDs as an independent light group, you need transformer 201206 and 16-pin connector 100006 which are sold separately.

LEDIFY KiuasLED lamp and SaunaLED series can be dimmed from the secondary side (12V). We recommend using LEDIFY Magic sensor 201234 or LEDIFY Remote control 241123.

KiuasLED is dimmable from the primary side using LEDIFY TRIAC dimmable 30W driver (201230X).

LEDIFY PÖLKKY wall light is designed for sauna, but it's suitable in all areas of home and also outdoors. PÖLKKY is installed on the wall approx. in height 160-180cm, where light is beautifully divided up and down along the wall surface. The light color is warm 3000K.

The luminaire body is untreated pine, so it can be processed to the desired color matching the sauna panels. When using a luminaire in the sauna or outdoors the body should always be painted or varnished to protect the wood.

**Kaari
(Arc)**

**Kierre
(Twist)**

**Kulma
(Corner)**

PÖLKKY

LED valaisin | LED ljus | LED light

PÖLKKY's light source is heat resistant for over 125°C, allowing the installation of the lamp in more than one meter height in the sauna. Heat resistance of the connecting wires is +180°C, the wires have silicone coating with glass fiber braid.

LEDIFY PÖLKKY is suitable for connection as a SaunaLED series add-on, SaunaLED lamps behind the backrest and PÖLKKY lights on the walls of the sauna give beautiful lighting.

PÖLKKY luminaire is suitable for use with solar panels with a voltage of 12VDC. PÖLKKY is dimmable from the secondary side (like the SaunaLED series).

A single LED light source can be replaced (spare lamp 4128449).

The sales package includes a wooden wall lamp with 2pcs SaunaLED light sources, 2pcs 5m cord and installation instructions.

Wall mounting is easy with a single screw (not included), the screw head snaps into place on the backside of the lamp.

PÖLKKY's wiring is leaded to the sauna from behind the wall structures.

NOTE. The PÖLKKY lamp needs LEDIFY 6W Driver 4013602 and LEDIFY 16-pin connector 4128425 (these can be purchased separately or you can connect to PÖLKKY with already existing SaunaLED series).

Examples:

Only 2 PÖLKKY wall lights in the sauna.

We recommend:

2pcs PÖLKKY lighting fixtures

6W SaunaLED Driver 201206

16-pin connector 100006

LAUDEVALO

LED saunavalo | LED-bastuljus | LED saunalight

LEDIFY LAUDEVALO is a sauna luminaire, which is installed under the sauna bench to create smooth and pleasant lighting. We produce LAUDEVALOs ready for installation, including all necessary parts. Thanks to its waterproof body, the luminaire works as well in outdoor kitchens, barbecues etc.

LEDIFY products have a 2 year warranty

IP67 LED STRIPS

IP67 LED-nauhavalaisin | IP67 LED ljuslist | IP67 LED strip

LEDIFY LED strips are extremely durable, reliable and high quality. Our LED strips are suitable for all indoor and outdoor spaces, public spaces, ships, cars and even work with solar panels. LEDIFY LED strips are trusted by many professionals.

The versatile and durable LEDIFY LED strip is fit in really tight spaces and illuminates surfaces evenly.

Thanks to the low operating temperature and high lumen output, LED strips provides a smooth and even light for kitchen worktops and other similar spaces.

LED strip can also be used in outdoors such as in terraces, stairs or railings. LED strips can also be installed inside the aluminum profile. We offer different kinds of profiles and they all come with a matte diffuser. The strip does not heat up, so it can safely be installed in a small space.

Installing the LED strip is easy with the strong 3M tape on the back side of the strip. LED strip can also be cut with scissors to the proper length from the cutting marks.

LEDIFY LED strip is available in two different color temperatures: 3000K and 4000K

The IP67 LED strip is suitable for use in challenging conditions. The silicon mass around the LED strip protects the it from moisture, dust and even from small shocks.

IP20 LED strips are available in powers: 4.8W, 7.2W, 9.6W and 14.4W / m and in colors of 3000K and 4000K

RGB LED strip is also available with IP20 protection

Please note that the max. length of LED strip is 10m.

Features

- Strip doesn't heat up, so it can also be installed in small spaces.
- Strong 3M tape
- 5m strip in sales package
- Long life
- 2 year warranty

PROFILES

LED-nauha asennusprofiili | LED- list profile | LED strip profile

Aluminum profiles for LED strips makes unique lighting solutions possible in home as well as in public spaces. LEDIFY aluminum profile length is 2 m.

The wear-resistant surface of the profile is easy to keep clean, for example in the kitchen; clean with a moist cloth. The LED aluminum profile is available in colors white, black, bronze and aluminum. End pieces are available in same color as the profile. The profile is finished with a white diffuser that smooths the light evening out the single LED spots on the strip.

By installing an aluminum profile with LEDIFY 14.4W/m 4000K IP20 LED strip, you can get excellent working light!

In the sauna we recommend using untreated (silver) aluminum profile and LEDIFY LED strip 4.8W/m IP67 to be used inside.

NOTE. The ambient temperature of the LED strip should not exceed +60°C

We also have an aluminum profile B model for recessed mounting as well as the C-model for installation at an angle of 45°

Final result

The background of the entire page is a photograph of a modern architectural detail. It features a dark, metallic-looking surface with a large, white, three-dimensional number '3' and part of a '4' visible. A vertical glass panel is on the left, and a small, clear, dome-shaped object is mounted on the top left. The lighting is dramatic, with strong highlights and shadows.

PORRASLED

LED-valaisinsarja | LED-belysning serie | LED lighting serie

LEDIFY PorrasLED lights bring beautiful lighting into stairs and corridors. The special needs of the staircase has been taken into account in design of the lamps; the light is guided to where it's needed and the dazzling of the light is eliminated to as small as possible.

Installing the PorrasLED to steps is easy. A Ø 12mm hole is made for each light fitting, where the LED light will attach by mounting springs. Each light fixture has a 10 cm long wire equipped with quick connector that is attached to a 5m connecting cable. If necessary, the LED light can be connected to total of 10 meters of wire (2 x 5m of wires).

COLOR OPTIONS FOR
PORRASLED

The PorrasLED is available in with white or silver body and the light color is 3000K. On special request we can also manufacture the series with 4000K light color. The PorrasLED luminaire is also great for boats and cars because of 12V supply voltage. The PorrasLED also works with solar panels.

PorrasLED Installation

The 5m wires of the PorrasLED series are connected by quick connectors to a 16-pin connector. From the 16-pin connector a 5m cable is attached to each LED light.

The LEDIFY PorrasLED can be dimmed from the secondary side (12V). We recommend using eg LEDIFY Magic Sensor 201234 or LEDIFY Remote Controller 241123.

The transformer supplied with the PorrasLED series can not dimmed from the primary side!

LEDIFY PorrasLED sales package includes

- 6, 9 or 15 lamps with wires
- 5m connecting cable for each lamp
- 16-pin connector
- driver 12V DC 6W
- installation instructions

We also prepare a ready-to-install series according to the customer's needs

Contact us or your staircase manufacturer.

HOHTO

LED valaistu räätälöitävä kyltti | Skräddarsydda skyltar med LED-ljus | Custom made sign with LED light

LEDIFY HOHTO is a illuminated sign suitable for outdoor use. HOHTO is made of weather resistant acrylic plate that is illuminated with LED lights. We laser engrave the sign by the customers wishes.

HOHTO works well as a house number, as a guidance sign or for example as a company advertisement. HOHTO can be mounted into wall with screws or you can hang it with wires.

Contact us and ask for possibilities.

HOHTO

LED valaistu räätälöitävä kyltti | Skräddarsydda skyltar med LED-ljus | Custom made sign with LED light

LEDIFY products have a 2 year warranty

ASKELMA

LED porrasvalo | LED-stegljus | LED stairlight

LEDIFY ASKELMA is a LED lighting solution for staircases. Light profiles are installed below the steps to create a smooth and pleasant lighting.

We produce a custom made sets ready for installation, including all necessary parts.

LED DRIVERS

Muuntajat | Transformator | Driver

We offer LED drivers for dry (IP20) and wet (IP67) conditions. LEDIFY transformers are short circuit and overheat protected. All our transformers have a 2 year warranty. LEDIFY LED drivers are designed for professional use.

12VDC transformers are suitable for use eg. LED luminaires, LED strips and with SaunaLED lighting series.

How much load can I add to a 6.25A driver? The power (W) of the driver can be calculated by multiplying the voltage (V) with amperes (A).

Example: $6,25A \times 12V = 75W$

If you want to install a 9.6W/m LED strip, divide power of the driver with the power of the LED strip.

Example $75W : 9.6W/m = 7.81m$ (So you can connect 7m of

9.6W/m LED strip to a 75W driver.) Note: We recommend to load up drivers only to 90% of its maximum capacity.

For dimming LEDIFY LED strip or SaunaLED series from the primary side, select 12VDC TRIAC dimmable driver. (201230X, 201250X or 201275X)

Our product range also includes IP20 drivers for mounting boxes, 350mA and 700mA, of which 700mA is suitable for use with the SaunaLED series.

SWITCHES AND DIMMERS

SLO-10

The SLO-10 is a radio frequency controller that can be used with all LC series receivers.

The signal range with no obstructions is approximately 30 meters. SLO-10 can be attached to almost any surface using the supplied screws or two-sided tape. LC series controllers, such as SLO-10, are using device addresses that are unique from each controller.

The number of device addresses is therefore not limited. The power consumption of controller is small. The batteries will last typically for years.

LTO-609

The LTO-609 motion detector is intended for controlling LC-series receivers (UHO1224, UHO200 and UKO1000S). Motion detection is implemented using infrared technology.

UHO-1224

The UHO-1224 is dimmer for 12-24 VDC LED lights. The lamp can be switched on, turned off and dimmed with SLO10 remote switch.

UHO-1224 is installed between 12-24 VDC voltage supply and the LED luminaire.

UHO-200

The UHO-200 is a dimmer unit that is installed between the supply voltage and the luminaire or TRIAC dimmable driver. The light can be switch on/off and dimmed with SLO10 remote switch.

UKO-1000S

UKO-1000S is a receiver that is connected between the supply voltage and the luminaire or driver. The light can be switched on and off with SLO10 remote switch.

SWITCHES AND DIMMERS

LEDIFY Radar

On / Off microwave motion sensor for lighting control. Operating voltage 230V. Adjustable light and motion sensitivity and timer.

DIM SET

The LEDIFY Dim Set remote control has a switch/dimmer function. The device operates on a radio signal (RF). Dim Set control unit is mounted on the secondary side. Operating voltage 12/24 V. Maximum load 48/96 W.

Profile switch

LEDIFY profile switch works inside the aluminum profile as a switch/dimmer. The switch works by touching the profiles diffusor cover where the switch is installed. Operating voltage 12/24 V. Max.60/72 W.

Magic Sensor

LEDIFY Magic Sensor is a switch/dimmer that is mounted behind wooden cabinets or wall panels. The device is working by touching the other side of the surface where the sensor is mounted. The thickness of the surface should be between 10 and 30mm in order for the sensor to work correctly. The Magic Sensor has a maximum load of 60W or 5A and it works with 12V voltage.
